Vault Cloud
Back-up as a Service

GROWTH OF DATA AND ITS IMPORTANCE

Data sits at the heart of every modern business throughout the world and its role is rapidly increasing in importance across all organisations. It underpins key processes, systems, supports decision-making, and enables organisations to better understand their customers and uncover new opportunities.

With this in mind, it is all the more vital to ensure that data is backed up and safeguarded in case of an outage, breach, error or disaster. There can also be complex legal requirements to adhere to in the management of data, so it is imperative that data is secure.

This service can form part of your compliance data strategy, whether this is under your Business Continuity Planning program, Disaster Recovery capability or Essential 8 model we can help meet your compliance requirements.

WHAT IS BACKUP AS A SERVICE?

Vault Cloud's BUaaS offering adds data protection features to Vault's existing secure cloud infrastructure. The backup service provides you with the ability to backup your data to Vault's cloud storage within your cloud region or to any geographically distant cloud region.

- Store and optimise backup data
- Enable rapid and effective recovery
- Monitor and manage backups
- Meet the ACSC 'Essential Eight'

It provides highly flexible, efficient, and secure backup and recovery. The service is available on-demand, with data being accessible safely, efficiently and easily.

Vault Cloud's BUaaS supports a broad range of platforms and applications out of the box, making it easy to implement consistent backup and recovery strategies across your IT environment.

The Backup service integrates with common enterprise applications to provide simpler and more robust data protection.

FEATURES & BENEFITS

SECURE

Vault Clouds BUaaS is hosted on infrastructure that is assessed to PROTECTED level and Certified Strategic.

SIMPLICITY

With an intuitive self-service interface that makes it easy to configure backup schedules, select service plans, view job progression and alerts - this is a great tool to keep on top of your storage needs.

FLEXIBILITY

As your data grows you can scale your usage reducing your capital expenditure and total cost of ownership.

OPTIMISED

Our advanced deduplication and data compression technology helps to minimise storage footprint.

FAST

Resilient data protection with recovery at 100Gbps speed - ensuring you recover to time, everytime.

COMPLIANCE

We can help to support existing and on-going compliance reporting and requirements.

LEVERAGE

Utilise Vault Clouds capabilities to deliver automated, continuous cloud replication that reduces costs and resources.

ENCRYPTION

End to End data security, encrypted in transit and at rest. For added peace of mind, you can bring your own encryption keys if desired.

EFFICIENCY

Highly efficient use of bandwidth and minimal storage footprint through the use of adaptive compression and block level optimisation.
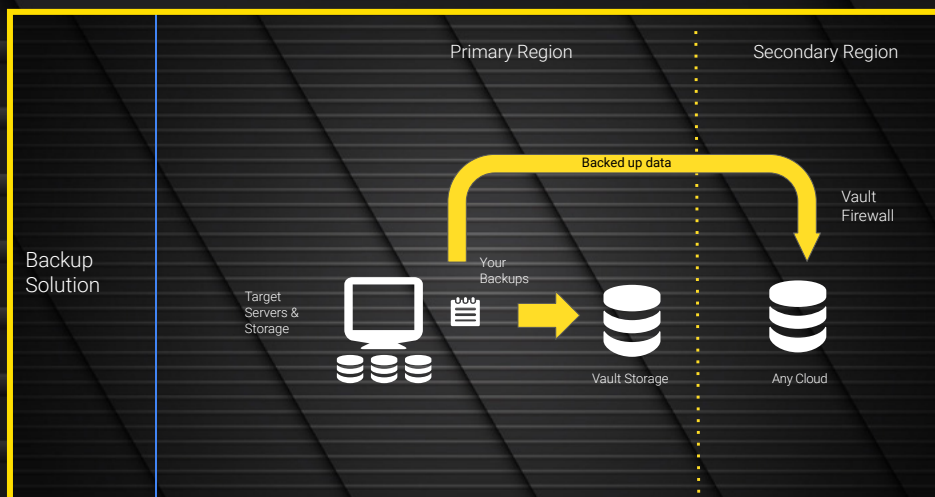

SCALABILITY

Scalability that enables you to meet changing business demands, thanks to flexible licensing arrangements.

ADOPTION

Ease of adoption, as it is quick to integrate new backup targets with the backup solution.

SOVEREIGN

Bring your own encryption keys to ensure that only you retain data sovereignty over your backups.

MANAGED SERVICE

Vault provides the backup service as a fully managed service requiring no interaction or maintenance from you during normal operation. If you need to restore data from a backup you can utilise a self service console for most types of restoration or, where assistance is required, Vault will work with you to perform the data restoration.

You will have an assigned Customer Success Manager to help with your account and services. Vault Cloud provides 24 x 7 support for high priority issues and 12 x 5 support for lower priority issues. You will receive the service you need and the reassurance that your back-up solution is in safe hands.

- 24 x 7 support for high priority issues
- 12 x 5 support for lower priority issues

You will be provided with a self service console application which can be used to verify the status of your backup jobs.

You will be promptly notified of any backup failures, and your Customer Success Manager will provide summaries of the performance of the backup solution on a regular basis.

All data restoration tasks (including files, directories, volumes and databases), except for the restoration of a complete virtual machine, can be accomplished via the self service console. A full virtual machine restoration will require support in order to prepare a new virtual machine to receive the restored data.
