

Secure Internet Gateway: Safeguarding Your Digital Assets

This solution safeguards your digital assets, enabling your organisation to thrive in a secure online environment. With Vault SIG, you can focus on growth, knowing your operations are protected from evolving cyber threats.

Unlock the Advantages of Vault SIG

ASD Compliance

Secure internet access aligned with the ASD Information Security Manual and certified at Protected level.

High-Security Standards

Built to meet the ASD's rigorous requirements.

IRAP Certification

Assessed and certified by the Australian Signals Directorate (ASD).

Defence-Level Approval

Recognised as a robust security solution for sensitive operations.

Recent breaches, such as the 2022 Optus attack that exposed millions of Australians' data, underscore the vulnerabilities businesses face. Such incidents can lead to costly downtime, lost revenue, and reputational damage, resulting in substantial recovery expenses.

To combat these threats, we introduce the Vault Secure Internet Gateway (SIG).

Reliable Support When You Need It

- ✓ 24/7 Support: Continuous assistance from the Vault Secure Operations Centre.
- ✓ Self-Service Portal: Easily make configuration changes through our user-friendly support portal.

Tailored Solutions for Every Need

- ✓ Service Levels: Available in three tailored service levels to meet diverse needs.
- ✓ Scalable Solution: Designed to grow alongside your organisation.
- ✓ Flexible Offerings: Available as a standalone product or part of a Vault cloud subscription.

Adaptable to Your Environment

- ✓ Multi-Cloud Deployment: Seamlessly deployable in multi-cloud or hybrid environments.
- ✓ Competitive Pricing: Access top-tier protection at a cost-effective price.
- ✓ Flexible Deployment Options: Tailored to meet various security standards.

A Comprehensive Security Architecture for Every Sector

Vault SIG architecture offers a robust solution for organisations aiming to secure their digital infrastructure. By seamlessly integrating multiple security components, it establishes a resilient network environment that effectively safeguards against a diverse array of cyber threats, all while ensuring compliance and maintaining operational continuity.

It not only protects Australian IT but also meets the diverse needs of various sectors, including:

Federal & State Government

Defence Industry

Tertiary Education Institutions

Healthcare Providers

Transport and Logistics

Food and Grocery Organisations

Banking and Finance

Energy and Resources

Secure Your Future with Vault Cloud's SIG

Fortify your network with confidence by establishing a secure perimeter using Vault Cloud's SIG. This comprehensive solution provides robust, defence-level protection against ransomware, phishing, malware, DDoS attacks, and other modern IT security threats, ensuring compliance with security regulations and internet usage policies. Empower your organisation to thrive as we safeguard your digital infrastructure.
